Homework 3 - Project Proposal

Machine Learning - CSCI 780 - Spring 2010 - Prof. Rosenberg

Due March 28 at 2:00pm

Write a 250-500 word proposal for your Final Project.

First, say whether you intend to write a paper or perform an experiment.

For a paper the proposal should include, minimally, the following

• A description of the task or technique you will be writing about.
• At least one paper that you expect to start your exploration from.

For an experiment the proposal should include, minimally, the following

• A description of the task that your experiment will perform.

• An idea for the classification/regression/clustering approach you will be taking. (This is not binding, but have an idea.)

• Where will you be getting data for your experiment. If you don’t know yet, that’s ok, but say so.

NOTE: While the length of this proposal is short, it should represent as much work as any other homework assignment.
