Write a Research Proposal for your final project.

This proposal should motivate the *specific* question that your term project will address. Then present your approach and describe why it is novel in comparison to the existing approaches or experiments that you have identified.

You will want to incorporate what you learned during the literature review into the proposal. If you have decided to change topic since Assignment 2, you will need to do another literature review to write a successful research proposal.

Follow the guidelines on described in

The proposal should be no more than 4 pages single spaced, 10pt font.

Be as explicit about your proposed work as possible. Where will you get your data? How will you design your experiments? If you have done any work already, include a description of it. The proposal should make your work seem completely believable.

A successful proposal will:
1) Motivate the problem that your work will address.
2) Describe the most relevant related work.
3) Describe the solution or investigation that you are proposing thoroughly.
4) Be convincing that the proposed solution or investigation will satisfy, solve or illuminate the problem that has been laid out in the introduction.
5) Include a time line of your expected progress.

Due October 29th.
